

ARTUTAN GALL-NUT POWDER

ANALYSIS

TANNIN	38.0 ± 2.0%
NON-TANNIN	8.0 + 2.0%
INSOLUBLE MATERIAL	46.0 + 2.0%
MOISTURE	12.0 + 2.0%

PROPERTIES

Gall-nut powder belongs to pyrogallol class of vegetable tannins.

The tannin leaches out rapidly and easily penetrates into the leather structure.

Gall-nut powder is advised for the production of different types of leathers.

It can be used in pretanning or for wet-white systems and gives satisfactory physical and chemical properties.

Gall-nut powder can be used alone or mixed together with other vegetable tannins, such as valex, sumach, mimosa, etc., in the production of garment-nappa, suede, light leathers and similar leathers.

This class of tannins have unique original colours and preferred in the dyeing of the eco-friendly leather productions.

Leathers tanned with gall-nut powder have good lightfastness and tear resistance and leads to light-weight leathers with smooth grain and soft handle..

PACKAGING

Gall-nut powder is presented in 25 kg net-weight laminated woven polypropylene bags and polyethylene inner bag.

STORING CONDITIONS

Gall-nut powder should be stored in dry places, protected from direct sunlight and kept in closed original package.
